

CT Abdomen/Pelvis Scan Prep

CT Scan WITH CONTRAST means WITH IV CONTRAST. Sometimes your Provider will order WITH ORAL CONTRAST as well. In that case, you will be given an iodinated solution to drink 45 minutes to 1 hour prior to your scan. There will be times when an order is placed for ORAL CONTRAST ONLY; it depends on what your provider orders and the patient's needs.

Please continue to drink fluids until your scan. No food for 4 hours prior to your scan.

PLEASE LET THE SCHEDULER OR TECH KNOW IF YOU ARE ALLERGIC TO IODINE!
