

Symptom Suppression is not the Answer. Start Addressing the Root Cause.

Multi-patented Protocol Supported by Research
For Patients With Type 1, Type 2, & Pre-Diabetes

"PIR®, for me, is turning back the clock. They've done something no hospital or doctor has been able to do."

Josh G.

**Type 1 Diabetic – 26 years
Neuropathy, Retinopathy**

"I haven't felt this good in years. It's like my neuropathy just disappeared and my energy level has increased."

Wayne K.

**Type 2 Diabetic – 18 years
Neuropathy – 10 years
Retinopathy – 2 years**

Addressing the Root Cause...

What is Physiologic Insulin Resensitization (PIR)®?

PIR® is a physician-directed treatment protocol in which insulin is delivered in physiologically informed, discrete units determined by the treating physician. This approach is designed to support the body's metabolic signaling and is used as part of a broader care plan for patients with metabolic disorders under clinical supervision.

When Providers Consider PIR®

- ✓ Rising insulin requirements with worsening resistance
- ✓ Progressive neuropathy despite glycemic control
- ✓ Patients with metabolic complications not responding to standard escalation

Do I need a referral?

No referral is required. We work alongside your primary care doctor to support your personalized treatment plan.

"I began to feel my feet again within eight weeks."

Bruce C.

**Neuropathy,
Retinopathy, 4 years**

Patient Report

- ✓ Neuropathy diminished
- ✓ Energy restored
- ✓ Weight controlled
- ✓ Medications reduced
- ✓ Erectile function restored
- ✓ Amputations prevented
- ✓ Mood and sleep improved
- ✓ Blood sugar controlled
- ✓ Wounds healed
- ✓ Hair and nail growth
- ✓ Dementia mitigated
- ✓ Alzheimer's alleviated
- ✓ Stroke recovery accelerated
- ✓ Fatty liver reduced
